

## ABSTRACT

**Title:** Method of Diver Rescue- Audiovisual Records

**Objective:** The aim of this paper is to create a complex audiovisual record describing practical steps to help and rescue a diver underwater.

**Methods:** As the formulation of the title implicates, for fulfilling the paper objective, the method of recording was selected. By the means of this method an audiovisual record was obtained, which was subsequently edited and supplemented with an audio commentary. While recording methods of simulation were used. The paper is initiated by theoretical part which was completed by methods of gathering, analysis and synthesis of data and which summarizes key information important for gaining deeper understanding of the problematics.

**Results:** Instructional video was successfully recorded. After editing the final record takes 14 minutes and 35 seconds and includes all expected parts.

**Key words:** Scuba diving, rescuing and helping a diver, diving signals, safety, prevention
